

Remote Working Security Assessment

Validate your remote working infrastructure's security posture to ensure that configuration issues do not expose your valuable corporate data and systems to unauthorized users.

Remote working strategies play a crucial role in virtually every company. Thorough security changes and structural adjustments are needed, as evidenced by a substantial increase in cybercrime during the current pandemic.

The risk of remote working

Vulnerabilities on remote working solutions can be abused to gain access to confidential information and systems. Identification of these vulnerabilities is essential in protecting your business.

How Davinsi Labs can help

- High expertise within Security & Service intelligence
- Many years of experience in security testing
- Assessment of external infrastructure's security posture and identification of vulnerable data and systems, using an industry-accepted methodology
- Focus on weaknesses related to authentication, segmentation, and privilege escalation
- A detailed report documenting the discovered vulnerabilities, the impact, and our recommendations
